```c
        h = a;
        l = b;
    }
    else
    {
        h = b;
        l = a;
    }
    printf("\n Highest of Two Numbers :%d", h);
    printf("\n Lowest of Two Numbers :%d", l);
    getch();
}
```

39] Same program using conditional operator

```c
#include <stdio.h>
void main()
{
    int a, b, h, l;
    clrscr();
    printf("\n Enter Two Numbers :");
    scanf("%d%d", &a, &b);
    h = (a > b) ? a : b;
    l = (a < b) ? a : b;
    printf("\n Highest of Two Numbers :%d", h);
    printf("\n Lowest of Two Numbers :%d", l);
    getch();
}
```
